7 Reasons for the razzfazz.ai-Box

1. **Unlimited possibilities**
2. **GDPR and EU AI Act compliant**
3. **Easy scalability**
4. **Sustainable AI sovereignty: Full performance without "Token Tax"**
5. **Maximum independence**
6. **Highest data security**
7. **Integrable and expandable**

Local AI.

The razzfazz.ai Box

The Basic Features: A ready-to-use foundation

The Box is delivered as an **operational unit** that combines hardware and software. You receive a system that is immediately functional thanks to **local computing power (GPUs)** and pre-installed **open-source components**.

Package contents include:

- Locally executable LLMs
- A user-friendly chat interface
- Agentic workflow automation
- The ability to build vector data & knowledge graphs
- Tools for document analysis, conversion, and editing
- Web research
- Document management and document search...
- ...as well as several tools for AI-supported software design, and much more — plug and play.

Modularity: Select and swap tools

A key feature of the razzfazz.ai Box is the **interchangeability of its content**. You are not locked into a single AI model; instead, you can integrate different AI models (Open Source LLMs like Llama, Mistral, or specialized models) depending on the task at hand. This **flexibility** allows you to provide the exact **right tool** for every department or use case.

Customization:

With the razzfazz.ai Box, you can "enrich" the knowledge of the LLMs with **company-owned data**. Through Retrieval-Augmented Generation (RAG), internal documents, databases, and process descriptions can be integrated, making company-internal knowledge available at the touch of a button.

Scalability: Expanding capacities

The razzfazz.ai Box grows with you. You can scale the base hardware by adding more Box(es) or specific cloud instances. This ensures that the local AI grows alongside your requirements.

Sovereignty: Control over the razzfazz.ai Box

Unlike Software-as-a-Service models, **complete control** over configuration, updates, and data flow remains with the operator of the Box. You can modify the Box, set individual security settings, and thus ensure that **sensitive information** never leaves the physical location. The Box therefore functions as a **private sanctuary** for innovation.
